PROFESSIONAL SUMMARY

Product manager and software developer with a B.S. in Computer Science and experience building internal applications, workflow automation, data products, and operational tools. Hands-on across product discovery, user stories, sprint planning, application development, APIs, databases, dashboards, and stakeholder rollout. Skilled in JavaScript/TypeScript, Node.js, SQL, Azure DevOps, Python, Go, and modern web tooling.

EDUCATION

Bachelor of Science, Computer Science - University of North Texas

May 2024

EXPERIENCE

Product Manager, Operational Innovation - Loenbro

Aug 2026 - Present

Dallas, TX

- Own product discovery and delivery for internal software products, translating user pain points and operational needs into product requirements, user stories, acceptance criteria, and prioritized roadmap items.
- Design and develop production applications using JavaScript/TypeScript, Node.js, REST APIs, SQL, and modern front-end tooling, partnering with users from prototype through release and iteration.
- Run two-week Agile sprints in Azure DevOps, managing backlog refinement, sprint planning, demos, testing, release coordination, and post-launch feedback across multiple active workstreams.
- Build workflow automation and data-driven tools that replace manual processes, standardize information capture, and give teams clearer visibility into status, exceptions, and next actions.
- Partner directly with business leaders and end users to validate problems, define MVP scope, make technical tradeoffs, and measure adoption and business impact after launch.

Specialist, Technical Services - Corgan

Jan 2025 - Aug 2026

Dallas, TX

- Designed and developed an internal field-reporting application using JavaScript, Node.js, Express, and PostgreSQL, converting unstructured photos and notes into standardized digital reports.
- Improved team workflows by mapping repetitive processes, identifying bottlenecks, and introducing lightweight automation, dashboards, templates, and structured data tracking.
- Built Excel-based models and validation tools that reduced manual calculations, improved consistency, and made technical review data easier to audit and reuse.
- Supported cross-functional teams by organizing project data, resolving information gaps, and turning recurring reporting needs into repeatable digital workflows.

Software Specialist - EconGranite

Jan 2023 - Jan 2025

Dallas, TX

- Improved CRM configuration, data quality, and reporting workflows used for customer tracking, pipeline visibility, scheduling, and follow-up.
- Supported website updates, analytics, forms, and light automation work, connecting digital tools to internal business processes and customer communication.
- Created spreadsheet and reporting automations that reduced duplicate data entry and improved visibility into sales, operations, and active work.

Software Engineer Intern - Jefx

Aug 2021 - Dec 2021

Dallas, TX

- Contributed to an Agile web application used by 500+ members, implementing front-end functionality, integrations, and usability improvements based on user behavior and feedback.

PROJECTS

Maistro | Express.js, PostgreSQL, Twilio API, OpenAI API, Mailchimp API, Heroku

- Built a web application that turns text-based inputs into structured estimates and client communications, integrating AI parsing, SMS, email, and persistent data storage.

Envoy Router in Go | Go, Docker, Zipkin, Grafana

- Built and containerized a custom Go router with distributed tracing and observability for routing behavior, latency analysis, and troubleshooting.

SKILLS

Product: Product Discovery, Roadmapping, User Stories, Backlog Management, Agile/Scrum, Sprint Planning, MVP Definition, Stakeholder Management, User Feedback

Languages: JavaScript, TypeScript, Python, Go, C, C++, SQL, HTML/CSS

Platforms / Tools: Azure DevOps, Node.js, Express, PostgreSQL, REST APIs, Docker, Git, GitHub, Linux, OpenAI API, Twilio API, Heroku
